

INSTRUCTION SHEET

CHICAGO COIN MACHINE COMPANY

"THING" - 51

TO SHUT GAME OFF

A toggle switch is located at the bottom of the cabinet near the front. The switch breaks the 115 volt line.

OUT HOLE GATE OPERATION

The out hole gate is locked by a ball going over the roll-over at the top of the playboard, near the rebound gate. This gate remains locked until a score of 300,000 per ball is made.

"THING SCORE" REPLAY ADJUSTMENT

"Thing Score Unit" is mounted on the playboard. To adjust replay awards on "Thing Score" it is necessary to lift the playboard.

SIDE LANE SPECIAL ADJUSTMENT

An adjustment socket is mounted on the 100,000 step-up unit to allow the special lanes to light up at scores of 2 million, 3 million and 4 million. All three adjustment plugs are in when the game is shipped from the factory. The operator may readjust these as he sees necessary.

SIDE 100,000 BUMPERS

An adjustment to allow side 100,000 bumpers to lite more or less often is provided for in the back-rack. The game is shipped with the plug set on liberal.

OPERATION OF GAME ON LOW VOLTAGE

For proper operation of the game where line voltage is 110 volts or less, move the plug to the low voltage tap of the socket mounted on the transformer.

METER

The meter records the replays scored during the play of the game.
