MICROPINTM

Once in a while a product comes along that is truly out of the ordinary. MICROPIN is such a product. Not a toy, MICROPIN is more than a miniature electronic pinball machine — it is a tribute to the state-of-the-art in electronics. MICROPIN is, in a word, extraordinary!

MICROPIN looks different from any pinball machine you've ever seen. The stainless steel exterior bespeaks the quality you'll find in every feature.

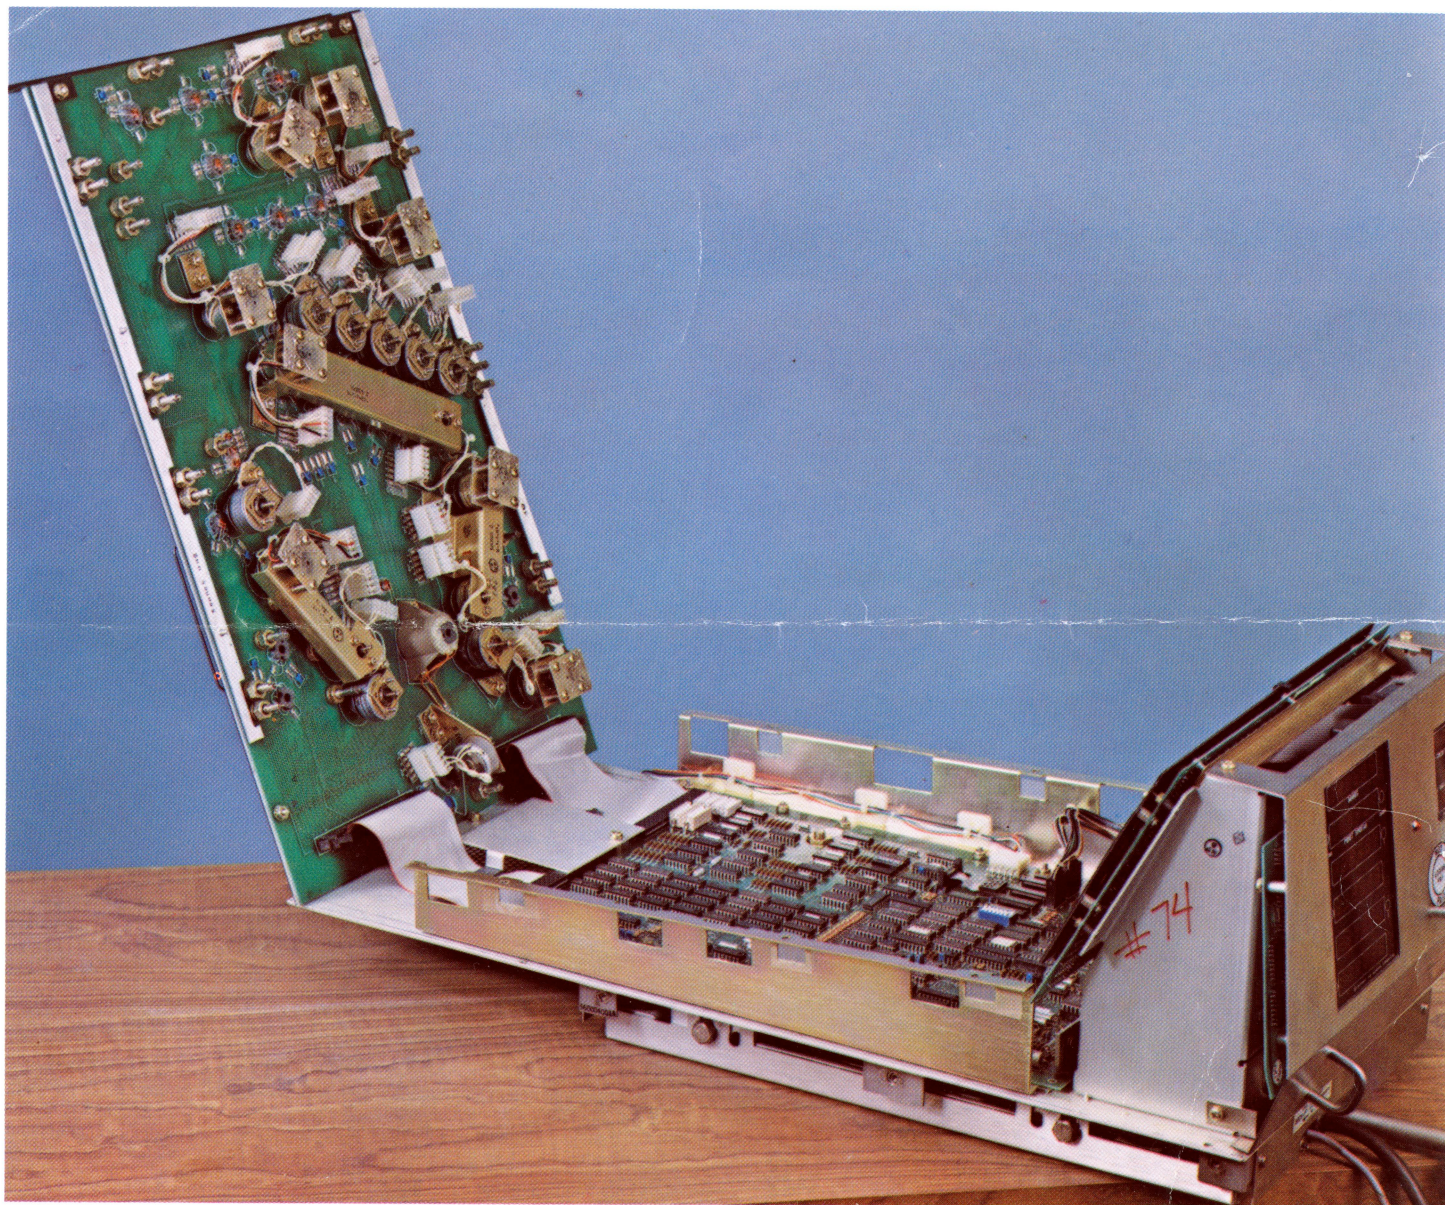

A SCORING WIZARD . . .

MICROPIN has 1 to 4 player capability with full memory. It automatically calculates point spread between players or teams. Highscores are LED displayed and kept in the memory. If no one tops the highscore after 200 games, MICROPIN will automatically display the previous highscore to keep the game challenging.

In addition, MICROPIN will "recall" previous game scores, between play, at the touch of the left flipper. Entire scoring and coin meter are also displayed on the back of the game for on-lookers or the bartender.

FORWARD THINKING FEATURES

- Automatic volume control which reacts to ambient noise levels and adjusts itself accordingly.
- 2-level tilt mechanism. Minor tilt will cause loss of the ball in play, major tilt results in "game over".
- Rubber shock mounts allow the players to "steer" the ball without tilting. (Note: MICROPIN should be fastened to the counter-top with double-stick tape or screws.)
- Battery back up system retains scoring even if MICROPIN is unplugged.
- MICROPIN may be operated with a separate coinmech-cashbox unit or by direct payment to an attendant. Price per credit is adjustable from 1 to 99 cents.
- Overhead lamp to illuminate the playfield is spring loaded and features a built-in spare bulb.
- Steel security cable may be used to padlock the unit to the location (a lug on the base is provided for this purpose).

BUILT TO ENDURE

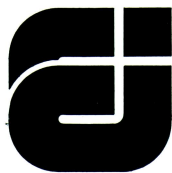

All bumpers, flippers and the ball are hard chrome plated so that no residue will accumulate on the playfield as happens with plastic and rubber parts. The playfield itself is made of back-printed mylar.

MICROPIN has no moving parts except the cups and flippers which utilize sealed solenoids. Only proximity type switches are used, there are no leaf or direct contact switches to fatigue or burn out.

ALL MICROPIN components are computer quality. Upon completion, each unit is subjected to a 48 hour test program at elevated temperature conditions. On location, the MICROPIN is cooled by a base-mounted whisper fan.

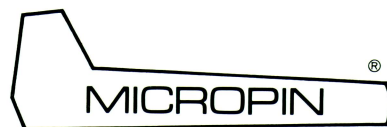

VITAL STATISTICS

Length	30 in.	75 cm	Width	13 in.	33 cm
Height	10 in.	26 cm	Weight	62 lbs.	28 kg
