Metallica Pro Pinball Receives LEDs to Complete Stern Pinball's All-LED Lineup

MELROSE PARK, IL – September 4, 2014 – Stern Pinball, Inc., the world's oldest and largest producer of arcade-quality pinball machines, announced today that the latest production of its popular Metallica Pro pinball machine has been upfitted with vivid, energy-efficient LED lighting. The addition of LEDs to Metallica Pro further enhances the already critically-acclaimed game experience with its notoriously fast tempos, aggressive audio tracks, and smooth ball flows. All future Stern Pro, Premium, and Limited Edition pinball games will have LED lighting.

“LED technology is a welcomed advancement in modernizing pinball. Commercial operators will benefit from improved reliability and earnings, while collectors will appreciate the brighter playfield and more vivid colors.” said Gary Stern, Chairman and CEO of Stern Pinball.

LED standardization is the latest step in Stern's ongoing program to modernize pinball while staying true to the game's historic roots. The updated lighting system complements Stern's recently updated modern metal and wood back box with decaled cabinet and speaker housing, now standard on all models.

The Metallica Pro LED model is now shipping in time for the holiday season, rounding out Stern's LED-outfitted

lineup of games that includes the latest release AMC's The Walking Dead alongside Star Trek, Metallica, AC/DC, Mustang and Iron Man Pro Vault Edition.

Pricing and Availability:

Metallica pinball is available through authorized Stern distributors and dealers around the world.

Metallica LED Pro version: \$5,595 (MSRP)
